2. Please tell me which of the following opinions comes closer to your own when it comes to building more same day independent surgery centers in North Carolina...

Some people say that North Carolina should not build more same day independent surgery centers. They say that North Carolina hospitals have been hit hard by state and federal cutbacks and that these surgery centers could cost them as much as $400 million dollars a year. They say that there will be billions of dollars in cuts to the state's Medicare program over the next 10 years due to the Affordable Care Act and hospitals will be forced to shut down if they are dealt another blow like this one.

Other people say that independent same day surgery centers should be constructed because procedures at such facilities are a third less expensive than the same procedures performed at hospitals. They say hospital surgery costs are increasing at 4 times the rate of inflation every year and these centers will keep costs down. They also say that these centers will be responsible for providing Charity Care to 7% of their business each year, which would benefit hospitals.

3. Would you be more likely or less likely to vote for a legislator who voted for a bill that could help reduce the cost of some common outpatient surgeries by up to 60%, reduce the cost for services such as MRI's and CAT scans by about 40% and create more places where you can receive these services?
